

WHAT IS CLAIMED IS:

1. A carrying case for securing a telecommunication device to a seat within a vehicle, comprising:

a) a housing member including a first inner storage compartment and a second
5 inner storage compartment;

b) said first inner storage compartment having walls for forming an interior storage space (34) for receiving and holding a telecommunication device therein;

c) said second inner storage compartment having walls for forming an interior
10 storage space (94) therein;

d) connecting means for detachably connecting said first inner storage compartment and said second inner storage compartment and for receiving and displaying a telecommunication device in said first inner storage compartment;

e) a hinge assembly including a hinge attachment strip member and a hinge
15 attachment flap member for detachably connecting said first inner storage compartment to said second inner storage compartment, said hinge attachment strip member being formed on a side wall of said first inner storage compartment;

f) said hinge attachment flap member of said hinge assembly being detachable from said hinge attachment strip member; and said hinge attachment flap member being reversible for moving said hinge attachment flap member from a first attachment position for having said housing member in a closed configuration to a second attachment position for having said housing member in an opened and assembled configuration;

g) a harness strapping assembly having a pair of detachable straps and strap connecting means for connecting to a seat of a vehicle; and

h) one of said detachable straps having at its outer ends means for releasably connecting to said strap connecting means of said first inner storage compartment.

2. A carrying case in accordance with Claim 1, wherein said connecting means includes a zipper closure member for detachably connecting said first and second inner storage compartments with each other.

3. A carrying case in accordance with Claim 2, wherein said first and second inner storage compartments include first and second outer perimeter edgings thereon, respectively.

4. A carrying case in accordance with Claim 3, wherein each of said outer perimeter edgings include a zipper strip element thereon for forming said zipper closure member for closing said first and second inner storage compartments together.

5. A carrying case in accordance with Claim 1, wherein said hinge attachment flap member includes a first surface and a second surface having first snap members on said first surface for attaching said flap member to hold said first inner storage compartment in said closed position and having second snap members on said second surface for attaching said flap member to hold said first inner storage compartment in said open position.

6. A carrying case in accordance with Claim 1, wherein said walls of said first inner storage compartment includes a top wall, a bottom wall, side walls and a rear wall for forming said first inner storage compartment; and wherein said walls of said second inner storage compartment includes a top wall, a bottom wall, side walls and a rear wall for forming said second inner storage compartment.

7. A carrying case in accordance with Claim 6, wherein a part of said rear wall (32) of said first inner storage compartment forms a first interior wall of a first inner storage pouch (50) having a front mesh wall for forming a first interior pouch storage space therein.

8. A carrying case in accordance with Claim 6 , wherein a part of said rear wall (32) of said first inner storage compartment forms a second interior wall of a second inner storage pouch (60) having a front mesh wall with closure means thereon for forming a second interior pouch storage space therein.

5 9. A carrying case in accordance with Claim 6, wherein a part of said rear wall (92) of said second inner storage compartment forms an interior wall of an inner storage pouch (100) having a front wall with closure means thereon for forming an interior storage space therein.

10 10. A carrying case in accordance with Claim 6 , wherein a part of said rear wall (92) of said second inner storage compartment includes a disc sleeve member attached thereto for forming a plurality of sleeve receiving slots for holding recording discs therein.

11. A carrying case in accordance with Claim 6, wherein said top wall (24) of said first inner storage compartment includes a pair of upper corners; each of said upper corners having an upper attachment holding loop and ring member thereon.

15 12. A carrying case in accordance with Claim 6, wherein said bottom wall (26) of said first inner storage compartment includes a pair of lower corners; each of said lower corners having a lower attachment holding loop and ring member thereon for receiving said releasably attaching means on said outer ends of one of said detachable straps.

13. A carrying case in accordance with Claim 1, wherein said top wall (24) of said first inner storage compartment includes a handle strap having a grasping section and having first and second ends thereto.

14. A carrying case in accordance with Claim 13, wherein said first and second ends of said handle strap are fixedly connected to each of said upper corners of said top wall (24) of said first inner storage compartment.

15. A carrying case in accordance with Claim 7, wherein said front mesh wall (52) includes an elastic opening band (54) for opening and closing said front mesh wall of said first interior pouch storage space relative to said first interior wall of said first inner storage pouch (50).

16. A carrying case in accordance with Claim 8, wherein said closure means includes a button closure member for opening and closing said front mesh wall of said second interior storage space relative to said second interior wall of said second inner storage pouch.

17. A carrying case in accordance with Claim 9, wherein said closure means includes a flap closure member for opening and closing said front wall of said interior storage space relative to said interior wall of said inner storage pouch.

18. A carrying case in accordance with Claim 1, wherein said hinge attachment strip member of said hinge assembly is fixedly connected to one of said side walls by a plurality of connectors.

5 19. A carrying case in accordance with Claim 5, wherein said hinge attachment strip member of said hinge assembly includes third snap members thereon.

20. A carrying case in accordance with Claim 1, wherein said hinge attachment strip member includes a first grommet ring having a first grommet opening for receiving a extension cord and plug therethrough.

10 21. A carrying case in accordance with Claim 1, wherein said hinge attachment strip member includes a second grommet ring having a second grommet hole opening for receiving an extension wire of a headphone set therethrough.

22. A carrying case in accordance with Claim 1, wherein said hinge attachment strip member provides for additional structural integrity to said first inner storage compartment
15 of said housing member.

23. A carrying case in accordance with Claim 1, wherein said hinge attachment flap member of said hinge assembly includes a flexible attachment section and a rigid attachment section being connected to each other.

24. A carrying case in accordance with Claim 23, wherein said flexible attachment section of said hinge attachment flap member includes a perimeter edge for attaching to said second inner storage compartment.

25. A carrying case in accordance with Claim 19, wherein said second snap members on said hinge attachment flap member cooperatively connect to said third snap members on said hinge attachment strip member of said assembled hinge assembly in order to join together said first inner storage compartment to said second inner storage compartment for forming said assembled housing member.

26. A carrying case in accordance with Claim 1, wherein said pair of detachable straps of said harness strapping system includes a first harness detachable strap for releasably holding and securing to a headrest of a front seat of a passenger vehicle and a second harness detachable strap for releasably holding and securing to a backrest section of a front seat of a passenger vehicle.

27. A carrying case in accordance with Claim 26, wherein said first harness detachable strap includes an adjustable strap and includes an adjustable buckle member for changing the length of said first harness detachable strap in order to fit about the headrest of the front seat of the passenger vehicle.

5 28. A carrying case in accordance with Claim 26, wherein said first harness detachable strap includes a buckle closure member having male and female elements thereon for releasably opening and closing said first harness detachable strap about the headrest of the front seat of the passenger vehicle.

10 29. A carrying case in accordance with Claim 26, wherein said second harness detachable strap include first and second ends each having first and second releasable latch members, respectively, thereon.

15 30. A carrying case in accordance with Claim 29, wherein said first and second releasable latch members are detachably connected to said lower attachment holding loop and ring members on said bottom wall (26) of said first inner storage compartment for releasably opening and closing said second harness detachable strap about the backrest section of the front seat of the passenger vehicle.

31. A carrying case in accordance with Claim 26, wherein said second harness detachable strap includes an adjustable harness buckle member for changing the length of said second harness detachable strap in order fit around the backrest section of the front seat of the passenger vehicle.

5 32. A carrying case in accordance with Claim 26, wherein said second harness detachable strap is used as a carrying shoulder strap such that said first and second releasable latch members are connected to said upper and lower attachment holding loop and ring members, respectively, when said housing member is in a closed configuration for carrying said carrying case to and from the passenger vehicle.

10 33. A carrying case in accordance with Claim 1, wherein said first interior storage space of said first inner storage compartment includes an interior perimeter cushioned wall member for holding, securing and cushioning of the telecommunication device within said first interior storage space.

34. A carrying case in accordance with Claim 33, wherein said interior perimeter cushioned wall member and said first interior storage space of said first inner storage compartment cooperate to receive a telecommunication device selected from a group consisting of DVD player units, televisions, combined TV and DVD units, television VCR units, computer monitors and equipment, video telephones and other telecommunication devices for use both separately or in combination with each other.

35. A carrying case in accordance with Claim 1, wherein said housing member of said carrying case is made from flexible materials such as leather faux leather, polyesters, canvas, woven fabrics and combinations thereof.

36. A carrying case in accordance with Claim 1, wherein said housing member is of a size and shape for storing of various telecommunication devices therein.
